

Information System (IS) Security Seminar

Professional Development

Turret Solutions and Precision Security Consulting (PSC) are again offering their comprehensive Information System Security Seminar Program. This is the program conducted for Consulting and Audit Canada and endorsed by Treasury Board Secretariat. Suitable candidates include those who wish to:

- Become more proficient in their primary Information System Security duties, and/or
- Prepare to write the Certified Information System Security Professional (CISSP) examination from the International Information System Security Certification Consortium Inc. (ISC²).

Commitment and Support

Turret, PSC and their associates are committed to the professional development of IS Security specialists within government and private industry. Our concentrated and focused seminar program is designed to permit busy professionals to prepare to achieve internationally recognized certifications in the most efficient and cost-effective manner. CISSP has recently received accreditation under ISO/IEC 17024, attesting to its status as the premier IS security certification. As part of this comprehensive package, the IS security training specialists will provide individual on-line study support for the duration of the

seminar program and during your final exam preparations.

Program Features

This program takes into account the fact that the volumes of information to be assimilated do not lend themselves to consecutive days of courses and “boot camps.” Therefore, weekly sessions are offered, which permit candidates to undertake the requisite reading and preparation for the sessions, as well as review the material covered in the seminars at a pace that is conducive to effective learning.

A minimum of two current CISSPs, as well as Subject Matter Experts for the individual Common Bodies of Knowledge (CBKs), will be on hand at each session to facilitate and guide candidates through the material. These facilitators and SMEs bring a wealth of experience and additional professional credentials to the seminar program.

Facilitators also provide exam tips and administrative assistance for those intending to write the CISSP examination. Most importantly, continually-updated study material represents the most current information in the field, drawing on all current CISSP books, as well as current INFOSEC periodicals and websites.

Course of Study

The study program is structured according to the ten CISSP CBKs:

- Information Security and Risk Management
- Computer Operations Security
- Physical (Environmental) Security
- Security Architecture and Design
- Access Control
- Cryptography
- Telecommunications and Network Security
- Application Security
- Business Continuity and Disaster Recovery Planning
- Legal, Regulations, Compliance and Investigations

Program Schedule

Weekly sessions are to take place 5:00 to 8:00 pm every Thursday starting on 3 September and continuing for a total of 14 weeks. Location is still TBD.

Cost

The cost is **\$2,500 (plus GST)**. Price includes a textbook and presentation material. **This fee does not include the cost of the examination**, scheduled in Ottawa in December. Individuals are responsible for registering for the exam.
